No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts, 01970) for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1992 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 20

NUMBER 1, MARCH 1992

KATHLEEN L. GRANT AND JUDITH P. KLINMAN. Exponential Relationships among Multiple Hydrogen Isotope Effects as Probes of Hydrogen Tunneling.....	1
ANDREA BENCINI, ANTONIO BIANCHI, ENRIQUE GARCIA-ESPANA, EDMUND C. SCOTT, LUIS MORALES, BINGHE WANG, TAMBOUE DEFFO, FUSAO TAKUSAGAWA, MATHIAS P. MERTES, KRISTIN BOWMAN MERTES, AND PIERO PAOLETTI. Potential ATPase Mimics by Polyammonium Macrocycles: Criteria for Catalytic Activity	8
PHILIP G. HULTIN AND J. BRYAN JONES. Probing Trypsin Specificity with Basic 3-Substituted Glutarate Diesters and Related Monoester Substrate Analogs: Evidence for Allosteric Activation of Trypsin Catalysis	30
VALERIE J. ROBINSON, HENRY W. PAULS, PETER J. COLES, ROGER A. SMITH, AND ALLEN KRANTZ. Carbon-13 NMR Characterization of the Papain Adduct Formed by Peptidyl Acyloxy-, Aryloxy-, and Chloromethyl Ketone Irreversible Inhibitors	42
GERALD A. ROSENTHAL. Radiochemical Synthesis and Colorimetric Analysis of Hydroxyguanidine	55
LISA L. WEI AND WARREN J. GOUX. ATP Cofactor Regeneration via the Glycolytic Pathway	62
JOSEPH E. TROPEA, NASHAAT T. NASHED, JOHN M. LOUIS, JANE M. SAYER, AND DONALD M. JERINA. Effect of Salt on the Kinetic Parameters of Retroviral and Mammalian Aspartic Acid Proteases.....	67
REVIEW	
RICHARD W. FRANCK. The Mechanism of β -Glycosidases: A Reassessment of Some Seminal Papers	77
NOTE	
V. LESKOVAC, S. TRIVIĆ, J. SVIRČEVIĆ, AND D. ČADŽIĆ. Charge Distribution in the Transition State in Addition Reactions of Cyanide Anions to N ₁ -Substituted Nicotinamide Halides	89

NUMBER 2, JUNE 1992

GAOCHAO TIAN. Effective Rate Constants and General Isotope Effect Equations for Steady State Enzymatic Reactions with Multiple Isotope-Sensitive Steps.....	95
C. SATISHCHANDRAN, CYNTHIA B. MYERS, AND GEORGE D. MARKHAM. Adenosine-5'-O-(2-fluorodiphosphate) (ADP β F), an Analog of Adenosine-5'-phosphosulfate	107
JAYANTHI S. RAJAGOPALAN, LIN-CHI CHEN, AND EILEEN K. JAFFE. Preparation, ¹³ C NMR Characterization, and Enzymatic Transformation of [U- ¹³ C]Chorismate to [U- ¹³ C]Prephenate and [U- ¹³ C]Hydroxyphenyl Pyruvate	115

HENRY W. PAULS, BILL CHENG, AND LORNE S. REID. 2-(Peptidamido)-cyclobutanones: A Novel Strategy for the Inhibition of Serine Elastases	124
STEPHEN L. BEARNE AND RONALD KLUGER. Phosphoenol Acetylphosphonates: Substrate Analogues as Inhibitors of Phosphoenolpyruvate Enzymes	135
YULIN HU, HERMAN ZIFFER, GUIYING LI, AND HERMAN J. C. YEH. Microbial Oxidation of the Antimalarial Drug Arteether	148
JAMES T. STIVERS AND MICHAEL W. WASHABAUGH. C(α)-Proton Transfer from Thiazolium Ions: Structure-Reactivity Correlations and the C(α)-H pK _a of 2-(1-Hydroxyethyl)thiamin	155
WATSON J. LEES AND GEORGE M. WHITESIDES. The Enzymatic Synthesis of 1,5-Dideoxy-1,5-diimino-D-talitol and 1-Deoxygalactostatin Using Fucose-1-phosphate Aldolase	173

NUMBER 3, SEPTEMBER 1992

CHRISTINA L. L. CHAI AND GORDON LOWE. The Mechanism and Stereochemical Course of Sulfuryl Transfer Catalyzed by the Aryl Sulfotransferase from <i>Eubacterium</i> A-44	181
SATENDRA SINGH, MONIKA Z. WRONA, AND GLENN DRYHURST. Synthesis and Reactivity of the Putative Neurotoxin Tryptamine-4,5-dione	189
JAMES K. HOGAN, WENDY PARRIS, MARVIN GOLD, AND J. BRYAN JONES. The Substrate Specificity of the Muscle L-Lactate Dehydrogenase of Spiny Dogfish (<i>Squalus acanthias</i>)	204
LULI ANGAW-DUGUMA, JAMES MARECEK, AND STANLEY SELTZER. The Synthesis and Enzyme-Catalyzed One-Step <i>cis-trans</i> Double Isomerization of Monomethyl 5-Oxo-1,3-hexadien-1-ylphosphonate, an Analogue of Maleylacetone	213
JUNGHUN SUH AND BYUNG KEUN HWANG. Enhancement of Durability of Chymotrypsin through Cross-Linking with Poly(allylamine)	223
JUNGHUN SUH, YOUNGHEE CHO, AND GWANGHOON KWAG. Chymotrypsin Linked to Poly(ethylenimine) Derivatives: Perturbation of Ionization of Active Site Groups	236
MARIKA ELLER, DMITRY ZAITSEV, BENGT FRANSSON, JAAK JÄRV, NIKOLAI F. MYASOEDOV, AND ULF RAGNARSSON. Serine Decomposition in Solid-State Catalytic Isotope Exchange of a Peptide	245
EDWARD J. CRANE III AND MICHAEL W. WASHABAUGH. Retrograde Aldol-Type Reactions Involving Thiamin in Aqueous Solution: Evidence for Changes in Transition-State Structure	251

COMMUNICATION

NALINIE S. M. D. WICKRAMASINGHE AND JAMES C. LACEY, JR.. Esterification of All Four Monoribonucleotides with Acetyl-D-L-valine Proceeds with a Preference for the D-Isomer but the D/L Ratio in the Products Declines as a Function of the Hydrophobicity of the Nucleotide	265
---	-----

NUMBER 4, DECEMBER 1992

BURT ZERNER. Frank Henry Westheimer: The Celebration of a Lifetime in Chemistry	269
YAN-MEI LI, DE-QING ZHANG, HONG-WEI ZHANG, GAI-JIAO JI, AND YU-FEN ZHAO. β -Carboxyl Catalytic Effect of <i>N</i> -Phosphoryl Aspartic Acid	285
MICHAEL W. WASHABAUGH, CHARLES C. YANG, JAMES T. STIVERS, AND KYUNG-SANG LEE. Mechanism of Hydrolysis of a Thiazolium Ion: General Acid-Base Catalysis of the Breakdown of the Tetrahedral Addition Intermediate	296
PAUL S. HILLERY AND LOUIS A. COHEN. Stereopopulation Control. 10. Rate and Equilibrium Enhancement in the Formation of Phthalides: The Case of the Missing Ground State	313
CAROL AFSHAR, EILEEN K. JAFFE, H. L. CARRELL, GEORGE D. MARKHAM, JAYANTHI S. RAJAGOPALAN, MIRIAM ROSSI, AND JENNY P. GLUSKER. The Molecular Conformation of Chorismic Acid in the Crystalline State	323
SHARON A. HIBDON, CHAROLETTE A. COLEMAN, JIABING WANG, AND CHRISTOPHER J. MURRAY. Isotopic Fractionation Factors of Intermolecular Hydrogen Bonds in Water	334
RAYMOND T. CUNNINGHAM, SUZANNE E. MANGOLD, LYLE W. SPRUCE, QI LONG YING, SANFORD R. SIMON, MACIEJ WIECZOREK, SHERMAN ROSS, JOHN C. CHERONIS, AND GARY P. KIRSCHENHEUTER. Synthesis and Evaluation of CE-0266: A New Human Neutrophil Elastase Inhibitor	345
RICHARD A. THOMPSON AND STIG ALLENMARK. The Effect of Long-Chain Alkyl Betainates on the Arylesterase-like Activity of Bovine Serum Albumin	356
JUNGHUN SUH AND MAHN-JONG KIM. Microenvironments of 3-[2-Imidazolylazo]-benzoyl-poly(ethylenimine): High Affinity for Ni(II) and 9-Anthracenecarboxylate Ions	366

NOTES

WILLIAM L. MOCK. Theory of Enzymatic Reverse-Protonation Catalysis	377
ANNA RADZICKA, SCOTT A. ACHESON, AND RICHARD WOLFENDEN. <i>Cis/Trans</i> Isomerization at Proline: Desolvation and Its Consequences for Protein Folding	382
AUTHOR INDEX FOR VOLUME 20	387
SUBJECT INDEX FOR VOLUME 20	389

Information for Authors

Bioorganic Chemistry publishes accounts of research that are at the interface of chemistry and biology. The guiding principle that the Editorial Board will follow in accepting manuscripts for publication is that the research either use the principles and techniques of organic and physical organic chemistry in attempting to solve some problem of relevance to biology, or describe chemical studies that are inspired by some biological observation. Within this context, manuscripts suitable for submission are ones that deal with such topics as: characterization of the chemistry involved in new enzymatic reactions and metabolic pathways; elucidation of enzyme mechanisms and structure; application of kinetic, isotopic, stereochemical, and spectral techniques to the study of enzymes and metabolic pathways; investigations of chemical model systems for enzymes, peptides, and other biological molecules; studies related to coenzyme structure and reactivity; development of catalyst systems that mimic enzymes and coenzymes; achievement of useful organic transformations by the application of enzymes; description of new chemistry that results from some finding in biology; development of mechanism-based and active site-directed inhibitors for enzymes, and characterization of the chemistry associated with their inhibition; investigation of the structure and mechanism of action of pheromones and other chemical communicants; determination of the molecular mechanisms for the action of hormones and of the molecular basis of pharmacology; elucidation of the principles involved in receptor site recognition; chemical modifications of nucleic acids and the application of such modifications to the manipulation of genetic material.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Bioorganic Chemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Although the journal will be devoted primarily to the publication of regular articles, Reviews and Preliminary Communications will also be published. In addition, Book Reviews and a Correspondence section will appear from time to time.

Regular articles must feature novel, previously unpublished material or represent full accounts of findings published earlier in preliminary form.

An acceptable *Review* may embrace the results of various workers in a given area or may feature recent developments from the author's own laboratory. A review that is distinguished by a novel interpretation or representation of earlier findings is especially suitable. The Editor welcomes inquiries concerning the suitability of a particular topic for a review article.

Preliminary Communications will receive accelerated publication and should describe particularly novel and significant new findings. They should be accompanied by a brief abstract and should not exceed 5 printed pages in length (approximately 3000 words), including references, tables, and figures.

Letters to the Editor offering interpretations of data that are different from those published by other authors will be entertained and, along with the original authors' rebuttal, will be considered for inclusion in the *Correspondence* section. It is hoped that this section will offer a forum where points of contention concerning various topics of interest to the field of bioorganic chemistry can be discussed in print. From time to time this section will also include announcements and summaries of meetings that are of interest to bioorganic chemists.

Address all submitted manuscripts and correspondence to:

Dr. Gordon A. Hamilton
Editor, *Bioorganic Chemistry*
Department of Chemistry
152 Davey Laboratory
Pennsylvania State University
University Park, Pennsylvania 16802

Manuscripts should be written in a clear and accurate fashion with careful attention to detail. Submit manuscripts (in English) in quadruplicate (one original and three copies), with copies of graphs, drawings, organic structural formulas, etc., suitable for direct reproduction. All material (including tables, legends, reference lists, and footnotes) should be typed double spaced on one side of 8½ × 11-in. white bond paper with 1-in. margins on all sides. Each page of the manuscript should be numbered. Page 1 should contain the article title, author's name (without degrees), affiliation, a short running title (not exceeding 45 letters and spaces), and an address to which proof should be mailed. Page 2 should contain a short abstract. Acknowledgments may be included as a separate section.

All nomenclature should be simple, unambiguous, and in conformity with the conventions developed by Chemical Abstracts and the International Union of Pure and Applied Chemistry. For further information regarding nomenclature, authors are advised to consult the Instructions to Authors of the *Archives of Biochemistry and Biophysics* (1991) **284**, xvi–xxii. Reprints are available from the Publisher.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Abbreviations should be in accordance with the International System (SI) as adopted by the 11th General Conference on Weights and Measures. Common abbreviations are: meter, m; centimeter, cm; millimeter, mm; micrometer, μm ; nanometer, nm; kilogram, kg; gram, g; milligram, mg; microgram, μg ; nanogram, ng; milliliter, ml; microliter, μl ; molar, M; millimolar, mM; micromolar, μM ; normal, N, millicurie, mCi; microcurie, μCi ; counts per minute or second, cpm or cps; disintegrations per minute or second, dpm or dps; centigrade, $^{\circ}\text{C}$; seconds, s; minutes, min; hours, h; standard deviation, SD; standard error, SE; percent, %; melting point, mp; boiling point, bp; calorie, cal; kilocalorie, kcal; nuclear magnetic resonance, NMR; infrared, ir; ultraviolet, uv; number, No.; Ångstrom units, Å; cycles per second, Hz; parts per million, ppm; Equation, Eq.

Tables must appear on a separate sheet with a descriptive title typed double spaced above the table. Tables must be numbered consecutively with Arabic numerals in order in the text.

Figures and graphs are to be numbered consecutively in Arabic numerals and cited in order in the text; legends should be typed double spaced on a separate sheet. Graphs should be plotted with black India ink on white paper no larger than 8½ × 11 in., with coordinates properly labeled; grid lines that are to show should be inked in black. Original drawings no larger than 8½ × 11 in. (21 × 27.5 cm) are preferred. The following standard symbols should be used in the legends to the figures because they are readily available to the printers:

▲ □ ■ ○ ● ⊙ × ◇ ◆ .

Photographs should be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible. Illustrations in color can be accepted only if the authors defray the cost.

Structural formulas and chemical equations should be typed or drawn with care, and arranged to fill space economically. Since chemical structures will be reproduced directly from manuscript copy, authors are asked to prepare such material using appropriate templates and to check it carefully before manuscript submission.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet, starting with the title; in tables they should be noted by superscript letters and placed at the bottom of the page containing the table.

References to the literature should be cited in the text by underlined Arabic numerals in parentheses. They must appear on a separate sheet, listed in numerical order, i.e., in accordance with order of citation in the text. Styling of references should conform to the following format (authors should refer to *Chemical Abstracts Service Source Index*, 1985, for styling of journal titles):

1. HAMILTON, G. A., AND BUCKTHAL, D. J. (1982) *Bioorg. Chem.* **11**, 350–370.
2. JARDETSKY, O., AND ROBERTS, G. C. K. (1981) NMR in Molecular Biology, pp. 417–447, Academic Press, New York.
3. OPPENHEIMER, N. J. (1982) in *The Pyridine Nucleotide Coenzymes* (Everse, J., Anderson, B., and You, K., Eds.), pp. 51–89, Academic Press, New York.

Proofs will be sent to the corresponding author. Authors will be charged for excessive alterations.

Fifty reprints of each article will be supplied free of charge. Additional reprints may be purchased; an order form will accompany proofs.

Personal computer disks. Manuscripts may be submitted to *Bioorganic Chemistry* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing disks for typesetting conversion, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, Inc., 1250 Sixth Avenue, San Diego, California 92101; telephone: (619) 699-6415; fax: (619) 699-6800).
